

21,900

hours.
That is how much time a person spends in a vehicle on average in their lifetime.

SIT BACK AND RELAX.

You know the feeling all too well. You get into your car, eat up the miles, and arrive seized up and stressed out – just in time for the next meeting. Sitting, sitting and more sitting. With RECARO, you step out of your car feeling relaxed and ready for whatever work can throw at you, even after a long journey. That's because our seats work around your needs. Because

we're experts in ergonomic design. And because we know that comfort is a combination of many factors – an ergonomic seat structure, firm upholstery, intuitive control, comfortable touch and optimum climate to name a few.

We know that human beings aren't built for sitting down. Let alone for hours on

end behind the wheel, where switching to a better posture is not an option. Your seat needs to support your body and relieve the strain. Our unique combination of ergonomics and comfort, together with the right adjustment options, are what makes a RECARO seat your seat.

Frank Beermann
Chief Engineer Industrial Design
RECARO Automotive

"The function of a product determines its form.

As RECARO designers, our top priority is ergonomics – it's all about the person in the seat:

Form follows human."

IF YOUR BACK COULD CHOOSE IT WOULD CHOOSE RECARO.

Mobility is synonymous with modern society. More and more people are spending more and more of their time in the car. For many drivers, it's their workplace. The seal of quality from AGR e.V., the German Campaign for Healthier Backs, helps drivers choose back-friendly products. The RECARO Ergomed E, Ergomed ES, RECARO Style Topline XL and the RECARO Podium carry the AGR seal. For more information, please visit:

RECARO SEATING TRAINING

1. Push your bottom as near as possible to the backrest. The distance from the seat to the pedals is adjusted so that your knee is slightly bent when the pedals are fully depressed.

2. Rest your shoulders as closely as possible on the backrest. Set the backrest tilt so that the steering wheel is easy to reach with slightly bent elbows. Shoulder contact must be maintained when the steering wheel is turned.

3. Set the seat height as high as possible. This ensures an unobstructed view to all sides and all displays on the instrument panel.

4. Set the seat cushion tilt so that it is easy to depress the pedals fully. The thighs should rest gently on the seat cushion without exerting pressure on it. Check the backrest tilt before starting the engine.

5. Adjust the extendable seat cushion so that the thighs rest on it to just above the knee. Rule of thumb: two to three fingers Space between the edge of the seat and the hollow of the knee.

6. The lumbar support has been adjusted correctly when the lumbar part of the back is supported in its natural shape.

7. The seat's side bolsters should fit so snugly to the body that the upper body is supported comfortably at the sides without being restricted.

8. If possible, adjust the upper edge of the headrest to the same height as the top of the head. Tilt: The distance to the head should be approx. 2 cm.

SYMBOLS TAILORED COMFORT

Lumbar support

Extendable seat cushion

Adjustable side bolsters

Height adjustment

Tilt adjustment

Flat seat cushion for getting in and out with ease

Seat heating
